

To the respected judges of the Global Enterprise Experience,

It was my third timetaking part in this contest and I need to admit that the experience I had this year was the best ever. The previous times, there was always some sort of problem or drawback. Once our team did not even submit a paper! That is why I am excited about how everything worked out smoothly and easily this time. I believe we owe it very much to the amazing leadership abilities of our leader, who was always available, guiding and supportive. Although we did not feel the necessity of using extra communication systems such as Skype or Facebook, I did not feel any caps in communicating merely through the basecamp and emails.

I found the subject really interesting and amazingly I was finding myself thinking of it unconsciously all the time, even after we had agreed on the subject of our paper. Living in a developing country myself, it made me think of many of the aspects that need to be improved in such countries as mine, and the role that I can play as a tiny insignificant drop in the ocean! But the fact is that the human mind knows no barrier and the capabilities of the youth has no limit if they decide to do something for the world they are living in.

Deep inside, I believe that our team could do much better if it wasn't for the time limit. The Idea was not innovative enough but applicable and expandable. However, I am totally satisfied with the final result.

The only drawback I can think of is the one member of our team missing. I am pretty sure he has his own reasons for not showing up and I feel sorry that we cannot include his name in our project, but the bright side is that it could not keep us from fulfilling the project in due time and contributing the best we could.
